

## Vacancy General Director

### What is RegMed XB?

RegMed XB is a virtual institute that uses regenerative medicine strategies to cure common chronic diseases. RegMed XB is a cross-border initiative that brings together multiple health foundations, top scientists, entrepreneurs and governments to cooperatively tackle ambitious challenges in regenerative medicine. The ambitious research focuses on curing patients with type 1 diabetes, kidney failure, cardiovascular disease and osteoarthritis. Looking to the future, the research will also focus on other diseases. The planned budget of the institute is more than 250 million euros for the first 10 years.

RegMed XB is not only a promise to patients; it is also a major international economic opportunity. Future RegMed XB solutions target large international healthcare markets. RegMed XB holds the promise to develop into a new, innovative industrial sector, a sector in which biotech companies, production companies, high-tech suppliers, research services providers, hospitals and research institutes can thrive and work together to create knowledge-intensive jobs and solutions for patients.
